EXECUTIVE PROFILE

ISTQB Certified **Sr. Software QA Engineer** with 5 years of hands-on experience leading quality activities across enterprise SaaS, web, API, mobile, and AI-powered applications. Strong background in **QA planning, UAT support, release validation, risk-based testing, defect governance, requirements analysis, automation, and cross-functional delivery**. Experienced in partnering with Business Analysts, Product Managers, Developers, Designers, and project stakeholders to translate business requirements into measurable quality outcomes and reliable releases. Demonstrated experience mentoring junior QA professionals, improving test coverage through automation, maintaining QA governance documentation, and driving timely defect resolution in Agile environments. Well positioned to contribute to platform excellence through disciplined quality governance, operational readiness, continuous improvement, and stakeholder coordination.

LEADERSHIP & VALUE AREAS

QA Ownership & Governance | UAT Coordination | Release Readiness & Validation | Quality Risk Management | Defect Prioritization & Resolution | Stakeholder Management | Requirements & Business Scenario Analysis | Regression Strategy | Test Automation & CI/CD | Process Improvement | QA Documentation & Standards | Mentoring & Knowledge Sharing | Agile Delivery | Cross-Functional Collaboration

PROFESSIONAL EXPERIENCE

REVE SYSTEM — Sr. Software QA Engineer

20 November 2023 – Present

- **Own quality assurance activities** across web-based and API-driven enterprise SaaS applications, from requirement analysis through validation and release readiness.
- Develop test strategies, test plans, business scenarios, test cases, regression suites, and supporting QA documentation aligned with product and business requirements.
- Lead day-to-day quality execution across functional, integration, regression, smoke, sanity, API, UI, and cross-browser testing.
- Partner with Business Analysts, Product Managers, Developers, and Designers to assess requirements, clarify business rules, identify dependencies, and surface quality risks early.
- Support **UAT and business validation** by translating critical user journeys and requirements into structured validation scenarios.
- Drive defect lifecycle management through Jira, including defect identification, documentation, prioritization, follow-up, retesting, and verification of fixes.
- Support release governance by executing critical validation suites, assessing regression risk, and verifying enhancements and fixes before release.
- Use Postman for REST API validation, including endpoint behavior, request/response data, business rules, negative scenarios, and integration behavior.
- Validate AI-powered chatbot and AI Agent workflows, including business logic, conversational flows, workflow behavior, and edge cases.
- Integrate automated tests into Jenkins CI/CD pipelines to strengthen repeatable quality controls and regression efficiency.
- Maintain structured test assets and knowledge documentation using Zephyr Scale and Confluence.
- Analyze test results and application behavior to identify recurring quality issues, risk areas, and opportunities for continuous improvement.
- Mentor junior QA members and facilitate peer training, knowledge sharing, and consistent testing practices.

BENGAL MOBILE QA SOLUTION — Assistant QA Engineer

28 November 2021 – 19 November 2023

- Collaborated with development teams and stakeholders to understand business and software requirements and convert them into comprehensive test scenarios.
- Designed and executed manual testing across functional, integration, regression, smoke, sanity, UI, and browser compatibility areas.
- Performed API testing with Postman and validated application behavior, responses, data integrity, and system functionality.
- Conducted SQL-based backend validation to verify application data and database operations.
- Managed defects through Jira, working with developers to reproduce issues, communicate impact, verify fixes, and support timely resolution.
- Participated in Agile sprint activities and communicated testing progress, risks, blockers, and quality status to project stakeholders.
- Developed and maintained Selenium-based web automation tests to improve regression coverage and testing efficiency.
- Supported release validation and quality assurance activities to ensure delivered functionality met defined requirements.

SELECTED PROJECT LEADERSHIP & DELIVERY EXPERIENCE

REVE CHAT — Software QA Engineer | REVE System

- Performed end-to-end functional, regression, API, automation, and AI feature validation for an AI-powered customer engagement platform.
- Validated critical customer engagement journeys and integrations to support reliable releases and consistent user experience.
- Worked across Product, Development, and Design functions to identify risks, clarify requirements, and coordinate quality activities.
- Supported continuous delivery through structured Agile testing, automation, regression validation, and defect management.

BRAC UPG DIGITALIZATION — Quality Assurance Engineer

- Collaborated with business and development teams to validate requirements for Android and web applications.
- Prepared detailed test cases and executed comprehensive QA activities against business requirements.
- Identified and reported defects and followed through on resolution to support delivery quality.

BRAC WASH PROGRAM — Business Analyst & Quality Assurance Engineer

- Contributed to requirements gathering, functional analysis, wireframing, and translation of client needs into testable solutions.
- Prepared test suites and led thorough QA validation in collaboration with project stakeholders.
- Supported delivery within planned timeline and budget while maintaining alignment with client expectations.

TECHNICAL LEADERSHIP TOOLKIT

QA & Testing	Test Strategy, Test Planning, UAT, Functional, Integration, Regression, Smoke, Sanity, UI, Compatibility
Automation	Selenium WebDriver, PyTest, Karate Framework, TestNG
API & Performance	Postman, Swagger, JMeter
Engineering	Python, Java, JavaScript, SQL, MySQL
Delivery & Governance	Jira, Zephyr Scale, Confluence, Jenkins, Git, GitHub
Quality Focus	Risk-Based Testing, Defect Management, Release Validation, Requirements Analysis, Continuous Improvement
AI Quality	AI Chatbot Testing, AI Agent Workflow Testing, LLM-based Feature Validation
Methodologies	Agile, SDLC, STLC, OOP

CERTIFICATION

- ISTQB Certified Tester / SQA Engineer — 4 December 2022
- Introduction to Software Testing — 2021

EDUCATION

Bachelor of Science in Computer Science and Engineering — Daffodil International University | January 2016 – January 2020 | CGPA: 3.53 / 4.00

PUBLICATION

Classification of Succulent Plant Using Convolutional Neural Network — First Author, 2nd International Conference on Cyber Security and Computer Science (ICONCS 2020), Springer Publication, pp. 695–704.

AUTOMATION PROJECTS

- **Koolio.ai**: Selenium WebDriver, Python, PyTest — automated login, audio upload/annotations, playback, and audio editing workflows.
- **My Store Website**: Selenium WebDriver, Java, TestNG — functional, integration, smoke, sanity, regression, UI, and compatibility testing.
- **WhatsApp UI**: Selenium WebDriver, Java, TestNG, JUnit — automated web messaging and message-status validation scenarios.

PROFESSIONAL STRENGTHS

Quality Ownership | Strategic & Analytical Thinking | Stakeholder Communication | Team Collaboration | Mentoring | Problem Solving | Attention to Detail | Continuous Learning | Time Management | Delivery Focus
